AIMA MEDICAL

Aima Medical supplies professional aesthetic equipment, including HIFU, cryolipolysis, IPL, RF, E-light, laser, vacuum cavitation and multifunction systems.

SUSPENDED VERTICAL PLASTIC ANTI-AGING SYSTEM

HOW DOES IT WORK?

THE WORKING PRINCIPLE OF THE MANTIS KNIFE INSTRUMENT

MMFU (MACRO&MICRO FOCUSEDULTRASOUND) refers to "macroscopic and microscopic high-energy focused ultrasound".
The "wave system" is a non surgical treatment for facial enhancement, tightening, and body contour shaping system. The depth can be adjusted according to different skin types and treatment sites to treat the dermis and subcutaneous adipose layer. Generate synergistic effects by simultaneously outputting energy through focused ultrasound. Energy synchronously penetrates the inner and outer layers of the skin without damaging the epidermal layer, resulting in significant pain and redness.

Layered anti-aging

Two types of treatment heads with different depths can achieve SMAS fascia layer and shallow fascia layer, with accurate stratification and anti-aging of the dermis

STEREOSCOPIC ANTI-AGING

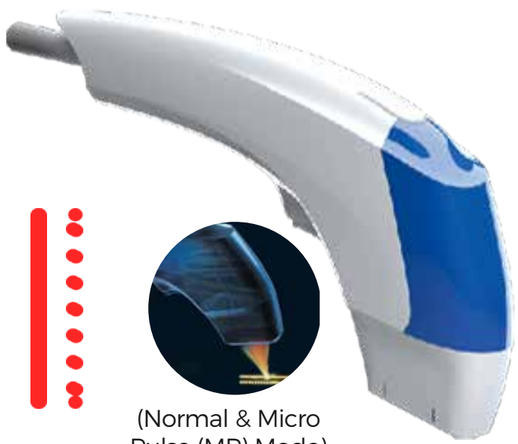

Ultra Booster Handpiece

B-1.5 B-3.0 B-4.5

The world's first circular "micropulse ultrasound" collaborative technology for circular hand tools, ultrasonic linear lattice focusing, can maximize the operating effect; in addition to improving, it also brings an additional sense of tightness; multiple modes can effectively reduce pain compared to traditional ultrasound modes.

(Normal & Micro Pulse (MP) Mode)

HIFU handle

T-1.5 T-2.0 T-3.0 T-4.5

T-6.0 T-9.0 T-13.0

The advantages of flat hand tools are targeted at the skin layer to the superficial adipose membrane layer, fat layer, muscle layer, and are customized in all directions according to different skin types, operating areas, and tissue levels.

Multi select MMFU X4

Normal Micro Pulse
Circular Micro circular

Ultra Booster Handpiece

Transducer withoptimal minimization

Infinte Expendables

Infinite Expendables with 3 handpieces&10 inter-changebale cartridges

Reduced Treatment Time

More than 2.5x faster transducers Eliminating trans-ducer return time

Lasting And More Effective
